

TECHNICAL DATASHEET

Medical / Industrial AC-DC Power Supply

1200 W with 5 V / 2 A Standby / MEB-1K2A series

Highlights & Features

- Up to 1200 Watt in 5" x 8.03" x 1.59" Package
- Up to 19.1 W/inch³ Power Density
- Full Power from 90 V to 264 V
- Full Power up to 50°C Ambient
- Up to 500 KHrs MTBF
- 2 x MOPP Isolation
- Suited for Type BF Medical Products.
- 5 V / 2 A Standby Output
- Current Sharing
- Conformal Coating
- Class B Conducted and Radiated EMI
- IEC60601-1-2 4th Edition Immunity Compliance
- Normal and Reversed Option for Remote On/Off and Power Good Signal
- Analog and Digital Voltage Trimming
- PMBus Ver 1.3 Supported
- Intelligent Fan Speed Control
- Optional USB/RS232/RS485 adapter for communication

Safety Certifications

- IEC60601-1 CB report
- TUV EN60601-1
- UL60601-1+CAN/CSA 60601-1
- IEC 62368-1 CB report
- UL 62368-1+CAN/CSA 62368-1
- CCC GB 17625.1; GB 4943.1; GB/T 9254.1
- BIS

Input			
Input Voltage	85 VAC ~ 264 VAC		
Input Frequency	47 Hz ~ 63 Hz		
Input Current	< 15 A		
Inrush Current	< 40 A		
Power Factor	> 0.95 @ rated load		
Efficiency	Up to 94% 1)		
Patient Leakage Current	< 100 uA normal, <500 uA SFC		
Earth Leakage Current	< 300 uA normal, <1 mA SFC		
Output			
Output Voltage	24 V	42 V	48 V
Output Current	0-50 A	0-28.5 A	0-25 A
Ripple & Noise	< 1% Vrated pk-pk		
Standby Power	5 V / 2 A (No minimum load required)		
Environmental			
MTBF	500 KHrs		
Operation Temperature	-20°C ~70°C 2)		
Operation Altitude	5000 m or 54 kPa		

1) Exclude fan power
2) Power de-rating with temperature above 50°C, refer to power de-rating curve for detail

Pin 9	DC RTN
Pin 10	DC RTN
Pin 11	Remote Sense +
Pin 12	Remote Sense -
Pin 13	Current Share
Pin 14	DC RTN

Medical / Industrial AC-DC Power Supply

1200 W with 5 V / 2 A Standby / MEB-1K2A series

Functions

Start-up Time

The time required for the output voltage to reach 90% of its final steady state value, after the input voltage is applied

Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state value.

Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 90% of its steady state value

Figure 4. Time Sequence

Dynamic Response (Main Output)

The power supply output voltage will remain within $\pm 5\%$ of its steady state value, when subjected to a dynamic load 50 to 100% of its rated current.

■ 50 to 100% Load

Figure 5. Dynamic Load

Inrush Current

Inrush current is the input current that occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

Figure 6. Inrush Current

Overvoltage Protection

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 6 under "Protections". Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

Overload & Over current Protections

The power supply's Overload (OLP) and Over current (OCP) Main output Overload (OLP) and Over current (OCP) Protections is achieved by constant output current control. If the output current increases higher than rated current, the current will be clamped to be constant ($<130\%$ rated current), output voltage will then drop if output impedance keeps decreasing in the constant current control. Finally output under voltage protection will be triggered if the output voltage falls below 75% rated value and enters "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition causing the OLP and OCP is removed and I_o is back within the specified limit.

Figure 7. Hiccup at OLP/OCP

Additionally, if the I_{out} is $>100\%$ for a prolong period of time (depending on the load), the Over Temperature Protection (OTP) may be activated due to high temperature on critical components. The power supply will then go into latch mode.

Medical / Industrial AC-DC Power Supply

1200 W with 5 V / 2 A Standby / MEB-1K2A series

Short Circuit Protection

Output OLP/OCF function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode". The power supply will return to normal operation after the short circuit is removed.

Over Temperature Protection

As mentioned above, the power supply also has Over Temperature Protection (OTP). This is activated when the overload condition persists for an extended duration and the output current is below the overload trigger point but >100% load. In the event of a higher operating temperature condition at 100% load, the power supply will run into OTP when the surrounding air temperature is higher than the operating temperature. When activated, the output voltage will go into latch mode until the input voltage is removed; then, reapplied, and the surrounding air temperature drops to its normal operating temperature.

Power Good

Power Good+/- pin is an isolated open collector transistor (80V/50mA rating). A resistor (suggested value 10 Kohm, 1/8 W) can be added between Power Good- pin and DC RTN, Power Good+ pin can be connected to 5 V standby (or, other available pull-up voltage that is no greater than the transistor rating). Value of resistor may have to be adjusted, depending on voltage used, and other end-use conditions of the Power Good+ pin connection to the product. When AC input is on, Power Good Signal (Shown in below figure) generated will be high. When AC input is off, Power Good Signal generated will be low. There will be a minimum of 5 milliseconds (at 1000 W load) between the time the Power Good Signal goes to low level, and the time when the output reaches 90% of its rated value.

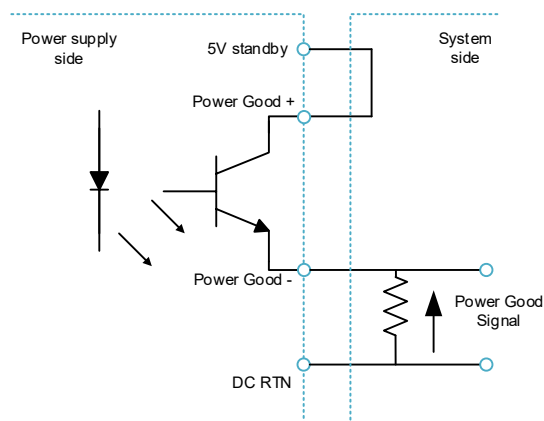

Figure 8. Power Good Connection

Figure 9. Power Good Time Sequence

Remote On_Off/Inhibit

Remote ON_OFF/INHIBIT uses an isolated diode located within the power supply. This signal can be used to enable or disable only the main output. When the main output is disabled, the +5 V Standby output will continue to operate. System can use a switch to conduct through this diode (suggested pull up resistor to 5 V standby with 1 Kohm resistor) to disable the main out. The signal can be floated (no connection to the signal), in order to enable the main output.

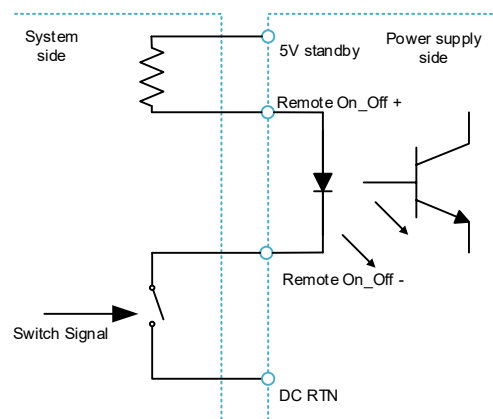

Figure 10. Remote On_Off Connection

Remote Sense

Remote sense feature can be used to compensate for the extra voltage drop on output wires that are connected from the main output terminals, to the load. With wires connected from the remote sense pins, at the same locations as the wires from the main output, the remote sense function can compensate up to 500mV voltage drop. The power supply will not be damaged if the remote sense pins are shorted, or if a reverse/inverted polarity connection is made to the load

TECHNICAL DATASHEET

Medical / Industrial AC-DC Power Supply

1200 W with 5 V / 2 A Standby / MEB-1K2A series

Voltage Adjustment

The power supply provides a potentiometer for user to adjust the output voltage. The output voltage is designed to be able to adjust up to $\pm 10\%$ of rated voltage, when the output is adjusted below nominal value, the maximum output current is the same as the nominal output, when the output is adjusted above nominal value, the output power cannot exceed the nominal maximum power (the maximum output current will be reduced accordingly).

PMBus

The power supply can communicate with the host product, using PMBus version 1.3 protocols. Multiple functions can be realized, such as monitoring the power supply operation status, and editing the power supply operating set-points. See user instruction for detailed control information.

Current Sharing

The power supply supports current sharing. Parallel the outputs as well as the current sharing bus to enable this feature.

Certificate

Delta has been certified as meeting the requirement of ISO 13485: 2003 and EN ISO 13485:2012 for the design and manufacture of switching power supply and adaptor for medical device.

In addition to a UL Total Certification Program (TCP) approved client laboratory for IEC 62368-1. Delta also has participated UL Client Test Data Program (CDTP) for IEC 60601.

Attention

Delta provides all information in the datasheets on an "AS IS" basis and does not offer any kind of warranty through the information for using the product. In the event of any discrepancy between the information in the catalog and datasheets, the datasheets shall prevail (please refer to www.DeltaPSU.com for the latest datasheets information). Delta shall have no liability of indemnification for any claim or action arising from any error for the provided information in the datasheets. Customer shall take its responsibility for evaluation of using the product before placing an order with Delta.

Delta reserves the right to make changes to the information described in the datasheets without notice.
